

Grow bigger bucks by harvesting does!

Harvesting
does...

* reduces the stress of
breeding on each buck

... so bucks are in better
condition when winter starts

* keeps population size in check

* intensifies the rut

... so hunters see
more bucks

* provides opportunities
for new hunters

... to feed their families a
sustainable, healthful meal

... so bucks have
more resources to
grow big bodies
and big antlers

... leads to
healthier bucks!
